Comparison of Trees Watered With and Without GMX Products

Doug and Daphne Skinner of San Bonito, Texas and their next door neighbors bought and planted a number of citrus trees at the same time. The Skinners are on a well and equipped it with GMX units. The neighbors used water from irrigation or resaca ditches.

After 3 years, the Skinner's trees are four times bigger than their neighbors, have ten times as much fruit and the citrus have twice as much juice.

The pictures are of Doug Skinner standing in front of both trees - one watered with GMX magnetically treated water and one without.
