Sub: Performance of GMX system in our Food Processing Plant

Dear Sir

This is to certify that performance of GMX Magnetic Conditioners is excellent. We would like to thank you for introducing such a wonderful product like GMX Magnetic Fluid Conditioners to us to solve scaling problem, which is due to hard water.

Since we are having severe problem of scale deposition in our Shell and Tube Condensers, Evaporative Condensers, Oil Coolers and Cooling Towers. On the basis of your recommendation; in August 2005, we had installed GMX Magnetic Fluid Conditioners on our recirculating water feed lines after pump.

It was amazing to see the hard scales started loosening up after three weeks of GMX installation. All the scales which comes out of the system settles in cooling tower sump. Even after eight months of installation we would not found ~~any~~ scale. Our system is now totally scale free and cooling towers are free of algae formation.

Happy with the performance of your product we will definitely going to install your product in our other plants. We appreciate you for the good service in this regard.

Yours Faithfully
For Sushil Ice and Cold Storage
